How is microwave therapy used?

- A low dose microwave energy is delivered to the skin.
- Tissue temperature is rapidly elevated.
- The immune system is alerted to the presence of the HPV virus, which causes many warts.
- The body attacks the HPV virus - destroying the lesion and preventing recurrence.

Treatment Protocol

2-3 treatments
4 weeks apart

Follow up 12 weeks
after final treatment

8-10 watts / 2 seconds
5 applications
